

Login option certificate file

Step 1: Personal details

The first step is to enter your personal data. This includes

When registering "For a private individual":

- Identification number
- Date of birth
- E-mail address
- User name

When registering "For an organization":

- Federal state
- Tax number of the organization
- Contact details for the contact person
- User name

Step 2: Verify your e-mail address

After entering your data, you will first receive an e-mail with a six-digit verification code to confirm your e-mail address.

Please enter this code on the Mein ELSTER page and then send it.

Step 3: Identification

To verify your identity, you have the choice between an identity check by letter and an online identity check.

Identity verification by mail

You will receive the activation information required to complete your registration separately by email and by mail at the address on file with the registration office or the tax authorities.

Your personal postal address is available from the registration authority under the tax identification number given. The postal address of the organization on whose behalf you are registering is available from the tax authorities under the tax identification number given.

You will receive a **Activation ID** by e-mail and separately by post a corresponding **Activation Code**. Delivery by post prevents an unauthorized person from creating an account in your name or in the name of the organization you represent.

As soon as you have received both activation data, you can complete the registration via the link in the e-mail with the activation ID.

Online Identity Verification

With online identity verification, you can prove your identity immediately using your ID card via an online procedure without personal contact and create your user account on the same day.

You have the choice between two online identity verification methods: with the Nect Wallet app or with the online ID function.

For the Nect Wallet app you need

- A smartphone
- The Nect Wallet app
- Your identity card

In this identity check, you download the app from our partner Nect and use it to record your ID card and a selfie video in which you read out two words. The app uses both the video and the voice recording to verify that the person on the ID card is actually you.

For the Online ID function you need

- A smartphone (NFC-capable) or a card reader
- The AusweisApp
- Your identity card
- Your ID card PIN

During this identity check, you download the AusweisApp on the device on which you are carrying out the registration. If you are using a PC or Mac, you can also install the AusweisApp on your NFC-enabled mobile device and use it as a card reader.

Step 4: Create account and initial Login

Identity Verification by Mail

You have already completed step 3 of the registration process and received an **e-mail with an activation ID** and a **letter with an activation Code**. In this step, you activate your access with this data. This step is not necessary if you are identifying yourself online.

If you do not want to / cannot click on the link to step 4 in the e-mail with the activation ID, you can use the following links to access step 4 of the registration process: [Entry Step 4](#)

In the last step, you need to set up access for a secure Login. It is recommended that you download the ElsterSecure app and use it like a key. Under "Other Login options" you will find further login options, including the option to log in with a certificate file.

You define the name of the certificate file and the corresponding password yourself. You will use this password-protected certificate file (file extension ".pfx") to carry out your Login in future. This password protects access to the private key contained in the file.

A certificate file is automatically created on the next page, which can then be downloaded. You can change the path and file name. You must retain the ".pfx" file extension.

Please only save the certificate file and do not open or import it on your PC. To ensure that saving your certificate file has worked, you now only need to complete the process by logging in with the certificate file you have just downloaded. To do this, select the certificate file on your PC with "Browse" and enter the password you have assigned.

Login with certificate file

Now always enter the correct path and file name of your certificate file and the corresponding password when Login. As soon as you click on the "Login" button, the login is carried out automatically.

If you have purchased several personal accounts, make sure you select the correct certificate file.
